## FEATURES

Dukane introduces the **ImagePro™8939**, featuring **Progressive Scan video technology**. Some projectors use a line doubler to convert the interlaced image into a progressive image. The Motion Adaptive Progressive Scan system is far superior, using Field Interlacing to provide twice as many lines. Line flicker is reduced and the newly generated lines provide the added sharpness, plus prevent any distortion even on a large screen, so images are clearer and a pleasure to view. Progressive Scan processing is the key to the high quality moving images achieved by this projector. It provides the original feeling of movie film. The Progressive Scan improves all video inputs such as composite, s-video, or component signals.

At just 14 lbs., the **8939** can be moved anywhere in your home, office, or school with little effort. The brilliant 3200 ANSI lumen light output can handle any projection requirements.

The 8939 is HDTV ready and also features 3RGB (computer) inputs, 3 video inputs, RS232 control, and mouse control via the IR remote. It has a native XGA resolution (1024 x 768).
